## Objective

---

I am a web developer with hands-on experience in building full-stack applications using Node.js, Next.js, and MongoDB. I am seeking a remote Technical Support / SaaS Support role where I can assist users, troubleshoot technical issues, and work with real-world SaaS systems while contributing part-time during college evenings.

## Skills

---

- Node.js
- JavaScript (ES6+)
- Next.js
- MongoDB
- NextAuth Authentication
- REST APIs
- Git & GitHub
- Debugging & Problem Solving

## Projects

---

### Multi-User Link Management Platform (Next.js + MongoDB)

- Built a full-stack application for managing and sharing bio links (Linktree-style platform)
- Implemented secure authentication using NextAuth
- Designed user-specific dashboards for link creation, update, and deletion
- Developed REST APIs for CRUD operations using Node.js backend logic
- Integrated MongoDB for persistent user data storage
- Deployed a production-ready application with authentication flow

### Full Stack Authentication System (Practice Project)

- Built a secure login/signup system using JWT authentication
- Managed protected routes and user sessions
- Strengthened understanding of backend authentication flow

## Education

---

### Diploma in Computer Engineering

Institution Name: Sant Longowal Institute of Engineering and Technology, Longowal  
Year of Completion: 2025

**Current Studies**

Sant Longowal Institute of Engineering and Technology, Longowal  
Degree: Bachelor of Engineering,  
Current Year: 3rd

**Additional Information**

---

Open to remote Technical Support / SaaS Support roles with evening availability. Strong interest in understanding real-world SaaS systems and solving user-facing technical issues.
